**National Estimate** > \$740 billion by 2040

# Utility TENS General Journey in the US

# Thermal Energy Network Legislation

■ Passed Legislation   ■ Filed Legislation   ■ Considering Legislation

MA - An Act Driving Clean Energy (2021-2022)

MN - Natural Gas Innovation Act (2021 + 2 bills with TENs in 2024)

NY - Utility Thermal Network & Jobs Act (2022)

CO - Thermal Energy Act (2023)

WA - Promoting the Establishment of Thermal Energy Networks (2024)

MD - WARMTH Act (2024)

VT - Act relating to Thermal Energy Networks (2024)

CA - Gas corporations: ceasing service: priority neighborhood decarbonization zones (2024)

# Thermal Energy Network Legislation Detail

Provisions	MA	MN	NY	CO	WA	MD	VT	CA
<b>Can utilities sell thermal energy?</b>	Commission can allow	Allowed for pilots	Allowed for pilots	Allowed for pilots	Allowed for pilots	Allowed for pilots	Allows utilities & other entities to obtain Commission authorization	Allows up to 30 neighborhood scale electrification pilots
<b>Pilots / Demonstration Projects</b>	Allowed	15% budget minimum for utilities > 800k customers	Mandated for 7 largest utilities (1 to 5)	Mandated for large utilities > 500,000 customers	Allowed for gas utilities	1-2 mandated for gas utilities > 75,000 customers	Allowed	Allowed
<b>Rate Structure and Cost Recovery</b>	Utility Commission to sort out	Utility Commission to sort out	Utility Commission to sort out	Utility Commission to sort out	Allows cost recovery for pilots through rates	Allows cost recovery for pilots through rates	Utility Commission to sort out	Allows cost recovery for pilots through rates
<b>Who can own the thermal energy network?</b>	Assumes gas utility	Assumes gas utility	Gas and electric can own and operate	Part of proceeding to evaluate ownership models	Gas and electric utilities can own and operate	Gas, electric, water utilities can own	Utilities and other entities can own and be regulated by Commission	Assumes gas utility
<b>Filing Timing</b>	File within 24 months		File 1-5 within 3 months	File 1 within 15 months	File intention within 12 months	File 1-2 proposals within 15 months	Commission report by 12/1/2025	Filed prior to 2030
<b>Labor Provisions</b>		Required in PUC workgroup	For utility pilots	For state agencies and universities	Consideration for Commission	For utility pilots		For utility pilots
<b>EJ &amp; Consumer Protection Provisions</b>	✓	✓	✓	✓	✓	✓		✓
<b>Alignment with climate mandates</b>	✓	✓	✓	✓	✓	✓		✓
<b>Data Reporting</b>	✓		✓	✓	✓	✓		✓
<b>Plans for gas pipes</b>	✓			✓	✓	✓		✓
<b>Additional Funds</b>				✓	✓	✓		
<b>Amends the Obligation to Serve</b>					✓			✓

As of Sept 2024

# Thermal Energy Network Legislation & Regulation

First rounds of legislation  
(2021-2025)

## Demonstration

- Allow or mandate pilots
- Align with climate mandates
- Ensure equity & affordability
- Include workforce
- Require data collection and reporting
- Cost recovery for pilots

## Development

- Set regulatory framework
- Remove barriers: expand obligation to serve
- Plan for gas pipes
- Prioritization of sites

Future legislation  
(2025-2030)

## Deployment

- Integrated planning
- Disincentivize new gas infrastructure
- Non-gas pipeline alternatives
- Define ownership models
- Financing & rate design
- Transition reporting

SIGNED INTO LAW MAY 30, 2024

## Vermont's Thermal Energy Networks Act

S.305 is a  
**GREEN LIGHT**  
for  
**THERMAL  
ENERGY  
NETWORKS**  
in  
**VERMONT**  
COMMUNITIES

Authorizes all municipalities to build Thermal Energy Networks and establish thermal energy utilities without Public Utility Commission approval or regulation, just as municipal water and sewer utilities operate under local control.

# Why a community -driven approach?

Leverage existing local thermal resources

Create accessibility and affordability through shared infrastructure

Keep energy dollars invested locally

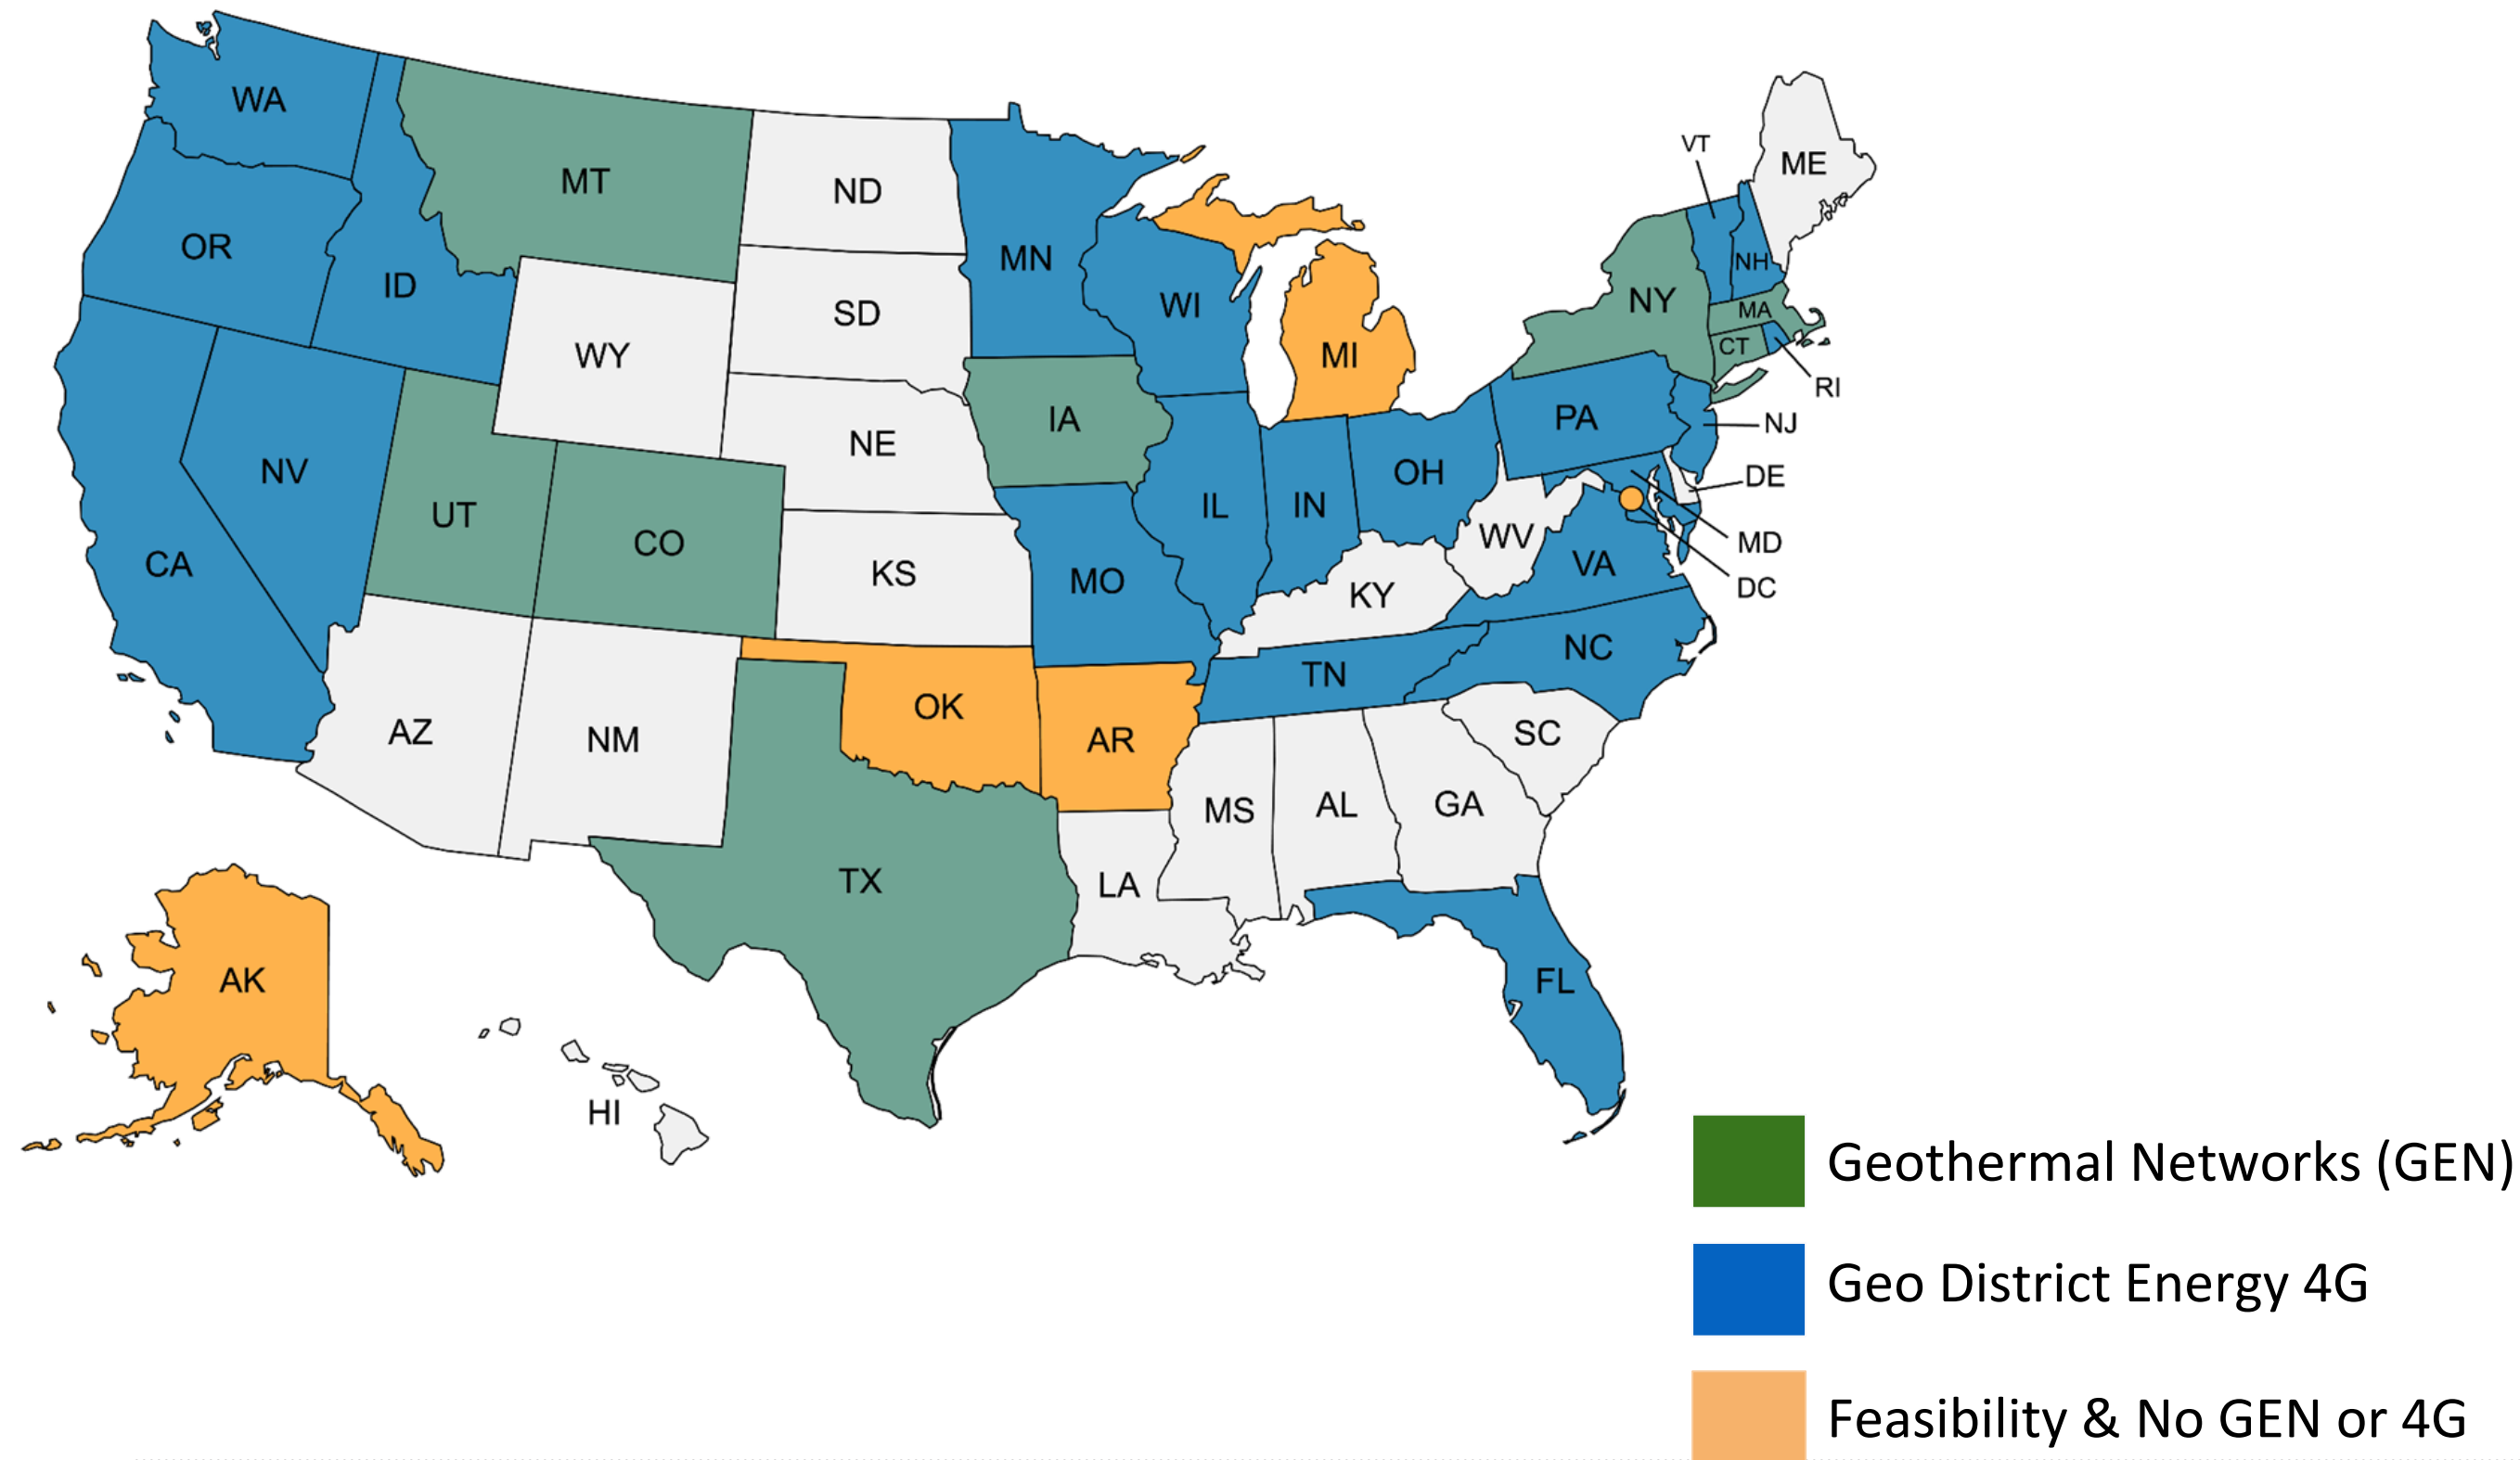

Support local priorities and economic development

Relieve reliance on oil and propane outside of limited gas utility territory

Take advantage of other infrastructure work to enhance resilience and cut costs

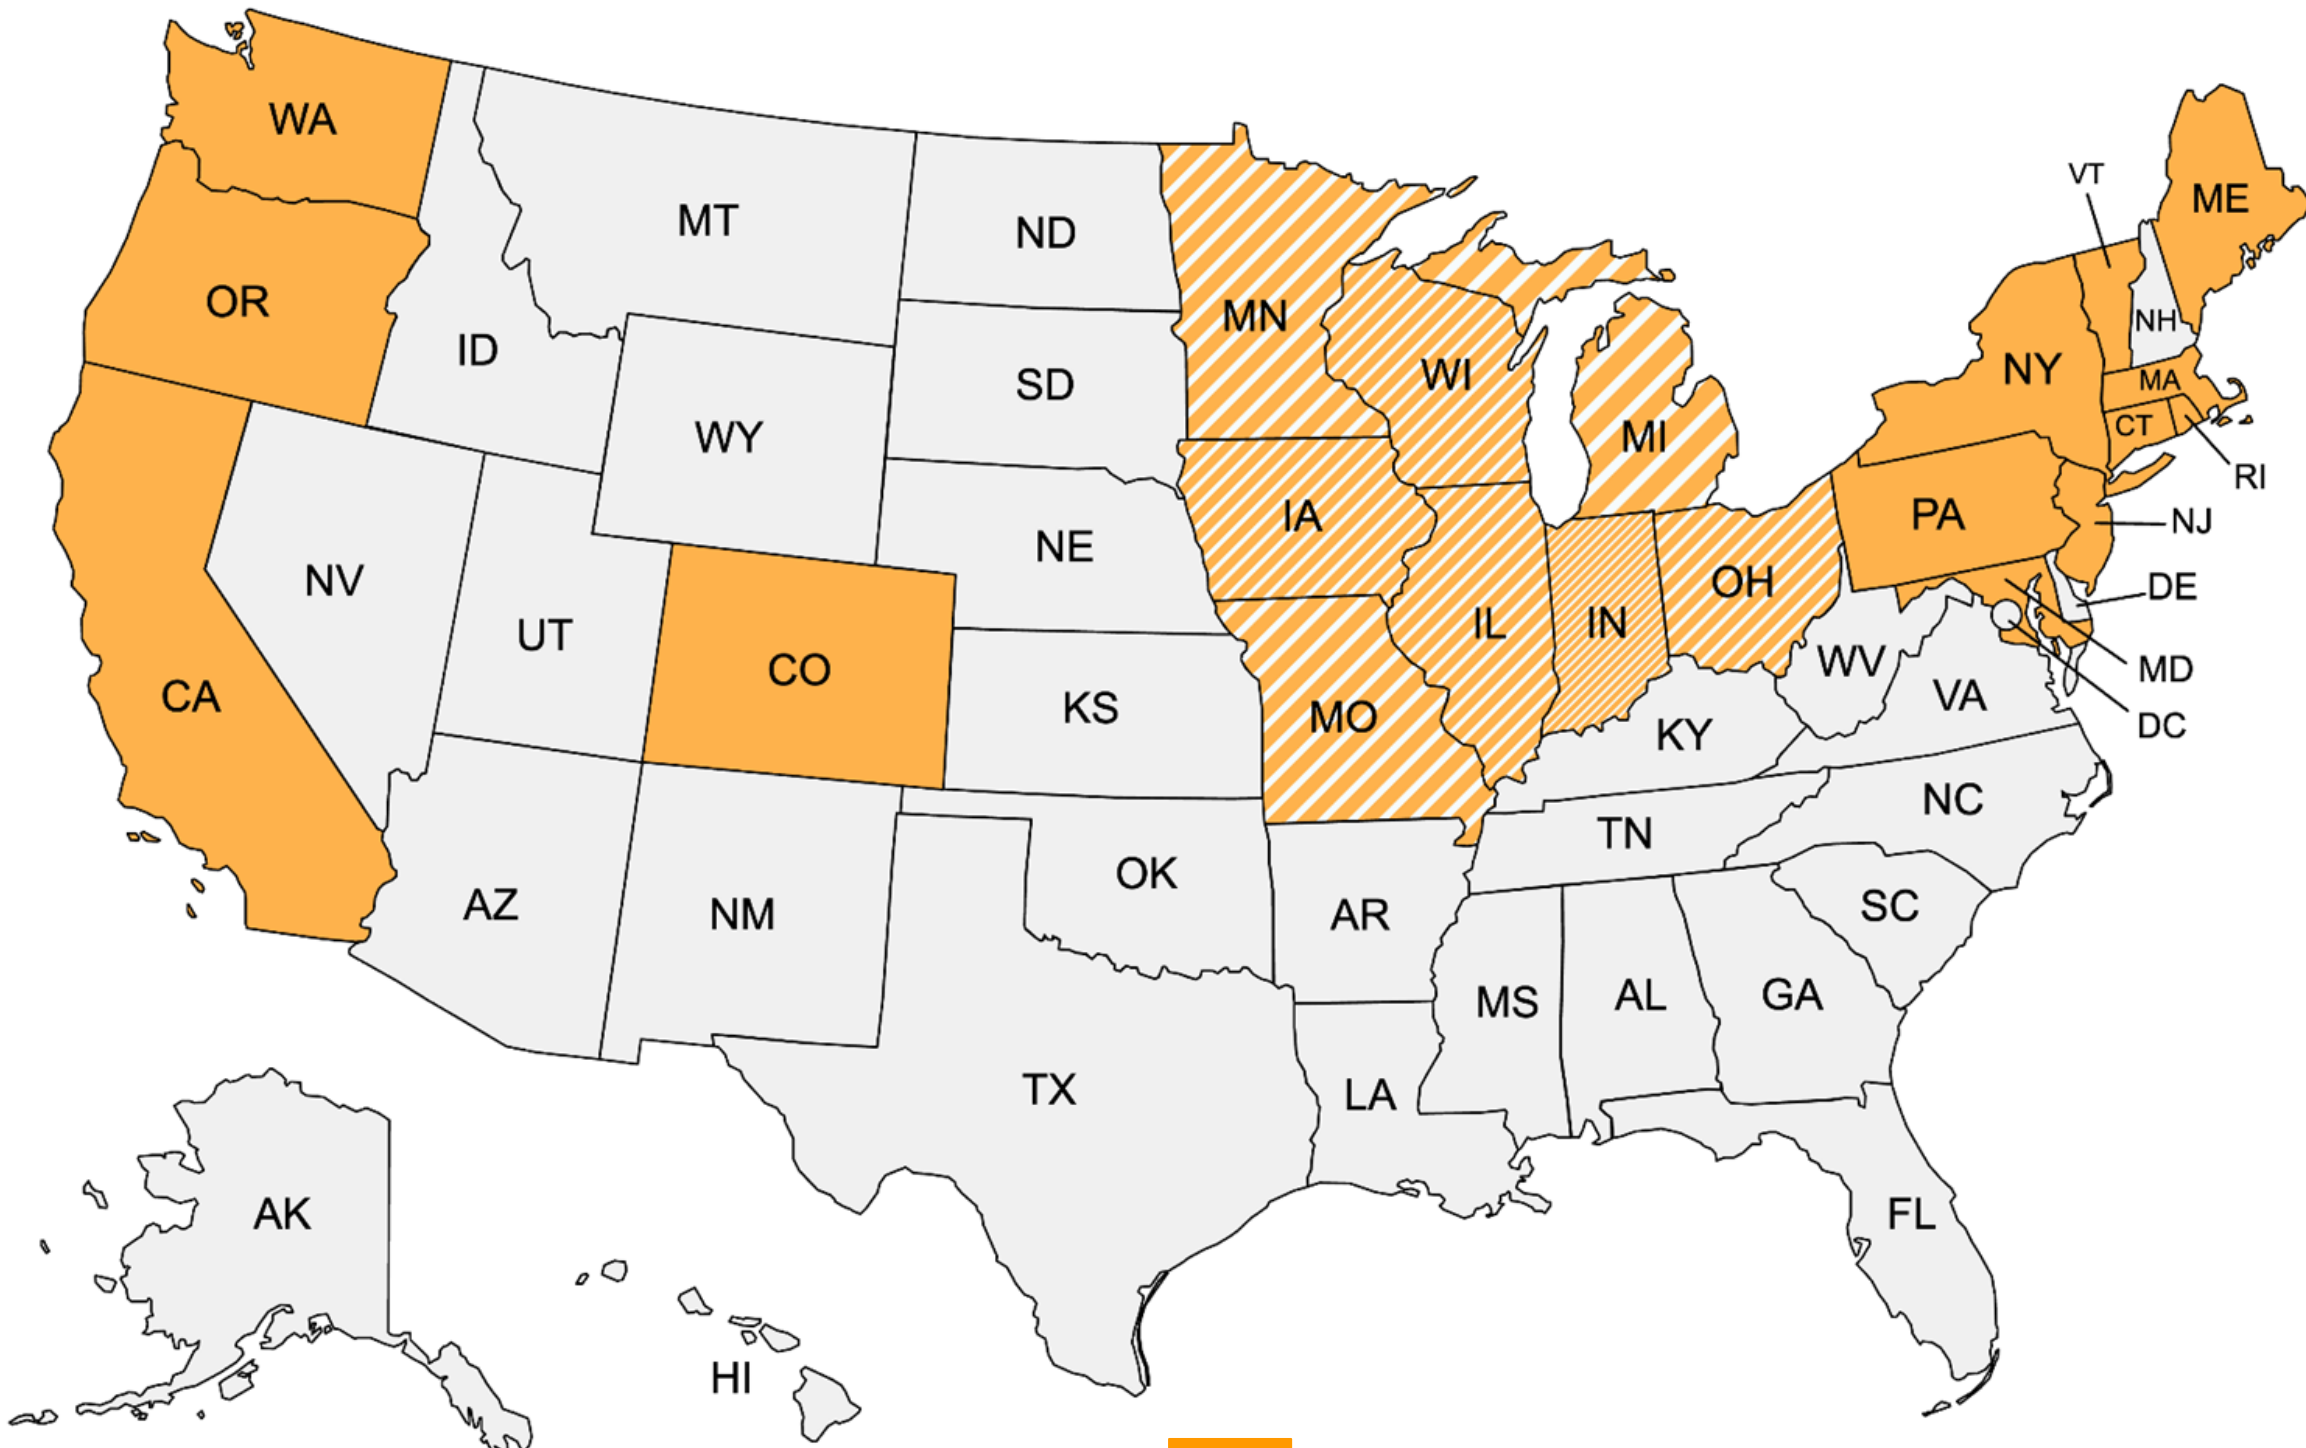

# U.S. Thermal Energy Network Sites > 100

## Feasibility Studies

- ❖ >35 NY
- ❖ > 30 CO
- ❖ 13 MA
- ❖ Washington, DC
- ❖ Philadelphia, PA
- ❖ Marquette U., WI
- ❖ DOE Grants:
  - Framingham MA
  - Ann Arbor, MI
  - Milwaukee, WI
  - Chicago, IL
  - Duluth, MN
  - Wallingford, CT
  - Carbondale, CO
  - Middlebury, VT
  - Seward, AK
  - Nome, AK
  - Shawnee, OK

# TENs Activity in North America

## Utility Networked Geothermal Collaborative

October 22, 2024  
NY-Geo, Brooklyn, NY  
Holly Braun, Business Development & Innovation Manager, NW Natural

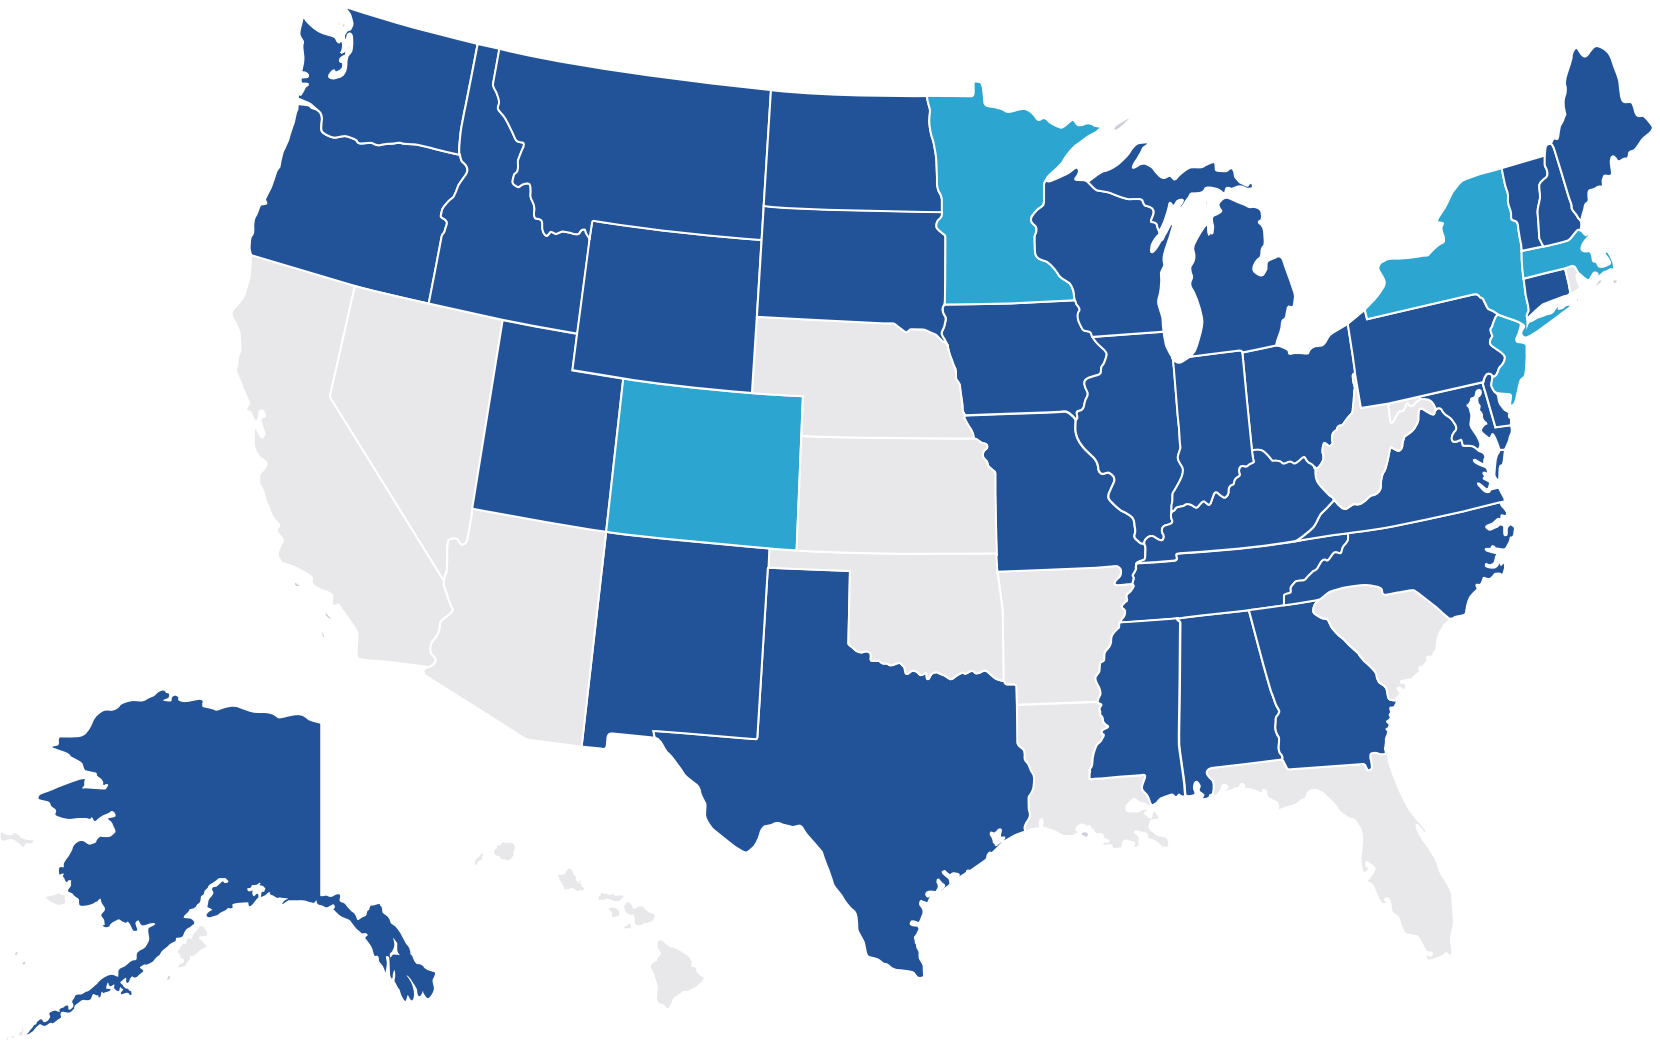

# Agenda

1. UNGC – 2 years later
2. WA State TENs bill
3. NW Natural TENs process

# UNGC and Pilot ~46% of NG customers represented

■ Gas Utility Pilots
 ■ Utility NetGeo Collaborative

# UNGC Working Together

**Policy** needed to accelerate adoption

## **Financial**

- Business model and rate structure congruent with the utility model
- Funding mechanisms outside utility rates

## **On site**

- Ascertaining the best sites
- Physically doing one of these projects

## **General**

- [Resources in this space](#)
- Support network
- How we can work with the other geo coalitions

# Collaborative wins

- **Treasury issue:** IRS amendment disallowing split ownership for ITC – rallied together for quick comments.
- **Accessible network:** ready access to answers and resources, enabling answers to get the legislation passed.
- **Regulatory:** Learnings to ease advancement through regulatory process
- **Tours:** Making it real- City of Troy and Framingham
- **2.0:** Leverage GTI for Innovation opportunities

# Looking ahead: 2025

MONTHLY MEETINGS

WEBSITE

IN-PERSON  
CONFERENCE ADD-ON

POSSIBLE NON-  
PROFIT STATUS

# WA HB 2131 Highlights

Gas and electric utilities invited to develop, own and operate Thermal Energy Networks in their respective service territories

Utility “obligation to serve” now includes thermal energy networks

Gas utilities’ advantage:

12-month head start to identify sites  
\$25M in grant funding from Commerce

Effective date: June 5, 2024

Construction complete by Dec 5, 2026

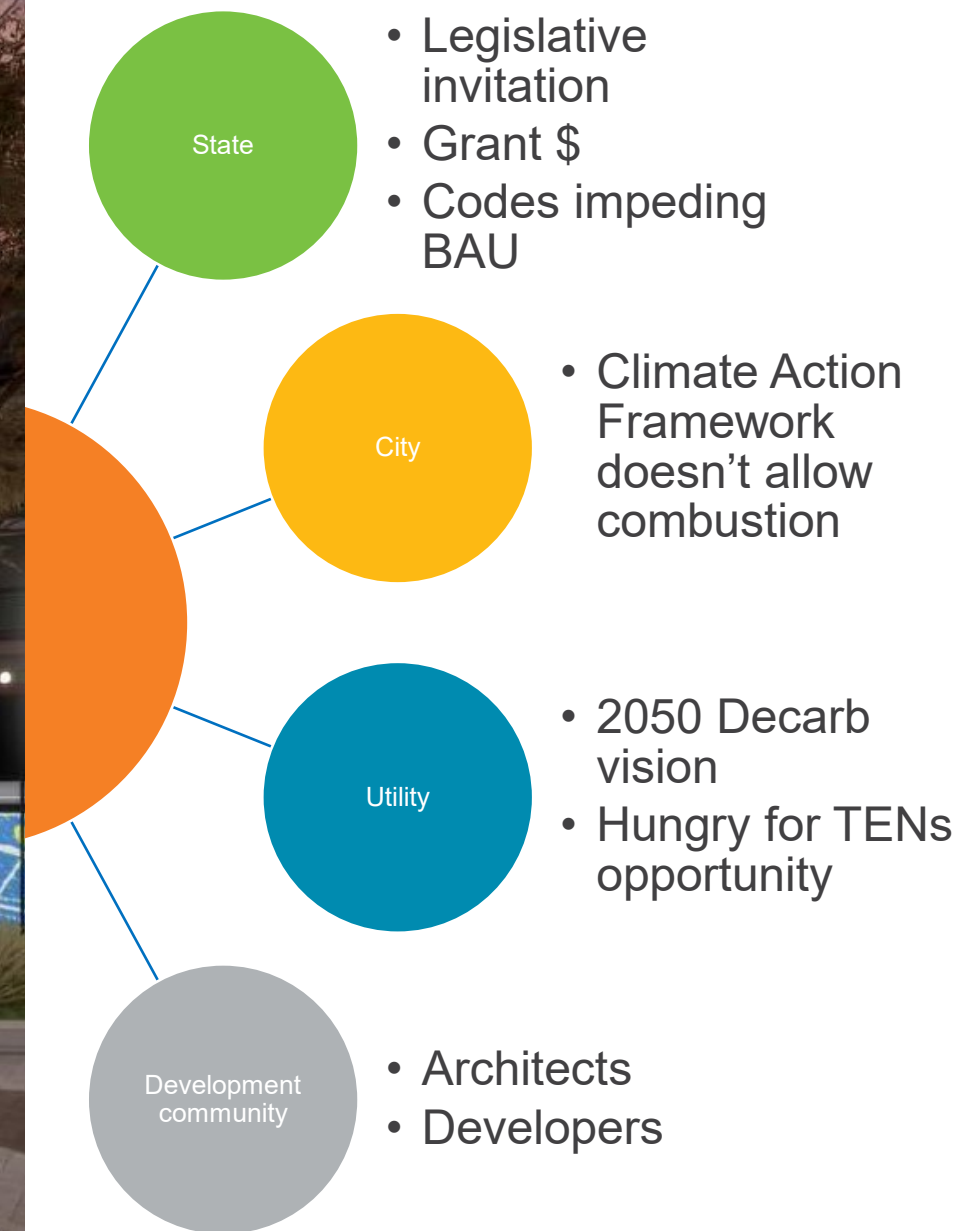

Option to request extension if showing solid progress

# Our Process

- Internal approval and direction
- Site identification **6/5/25 deadline**
- 30% design work and construction estimates
- Commission filing, wait for approval
- Grant application, wait for approval
- 100% design
- RFP for construction vendor
- Construction **12/5/26 deadline**

# Alignment

Let's create the future we imagine.

# Community Ground source Heat Pump Demonstration Project Update

**David Podorson, Sr. Product Developer**

October 22<sup>nd</sup>, 2024

# Legislation

- File a demonstration project in CO
- Must contain either a DIC community, a mountain community, or a region of gas capacity constraint
- No cost cap

**CO HB23-1252**  
Thermal Energy Services

- Identifies communities interested in piloting gas alternatives projects
- Utility and local government jointly file a neighborhood-scale alternatives project

**CO HB24-1370**  
Reduce Cost of Use of Natural Gas

- Allow natural gas utilities to meet Minnesota's greenhouse gas reduction and renewable energy goals through innovative resources
- ~10M cost cap on district energy projects for XE

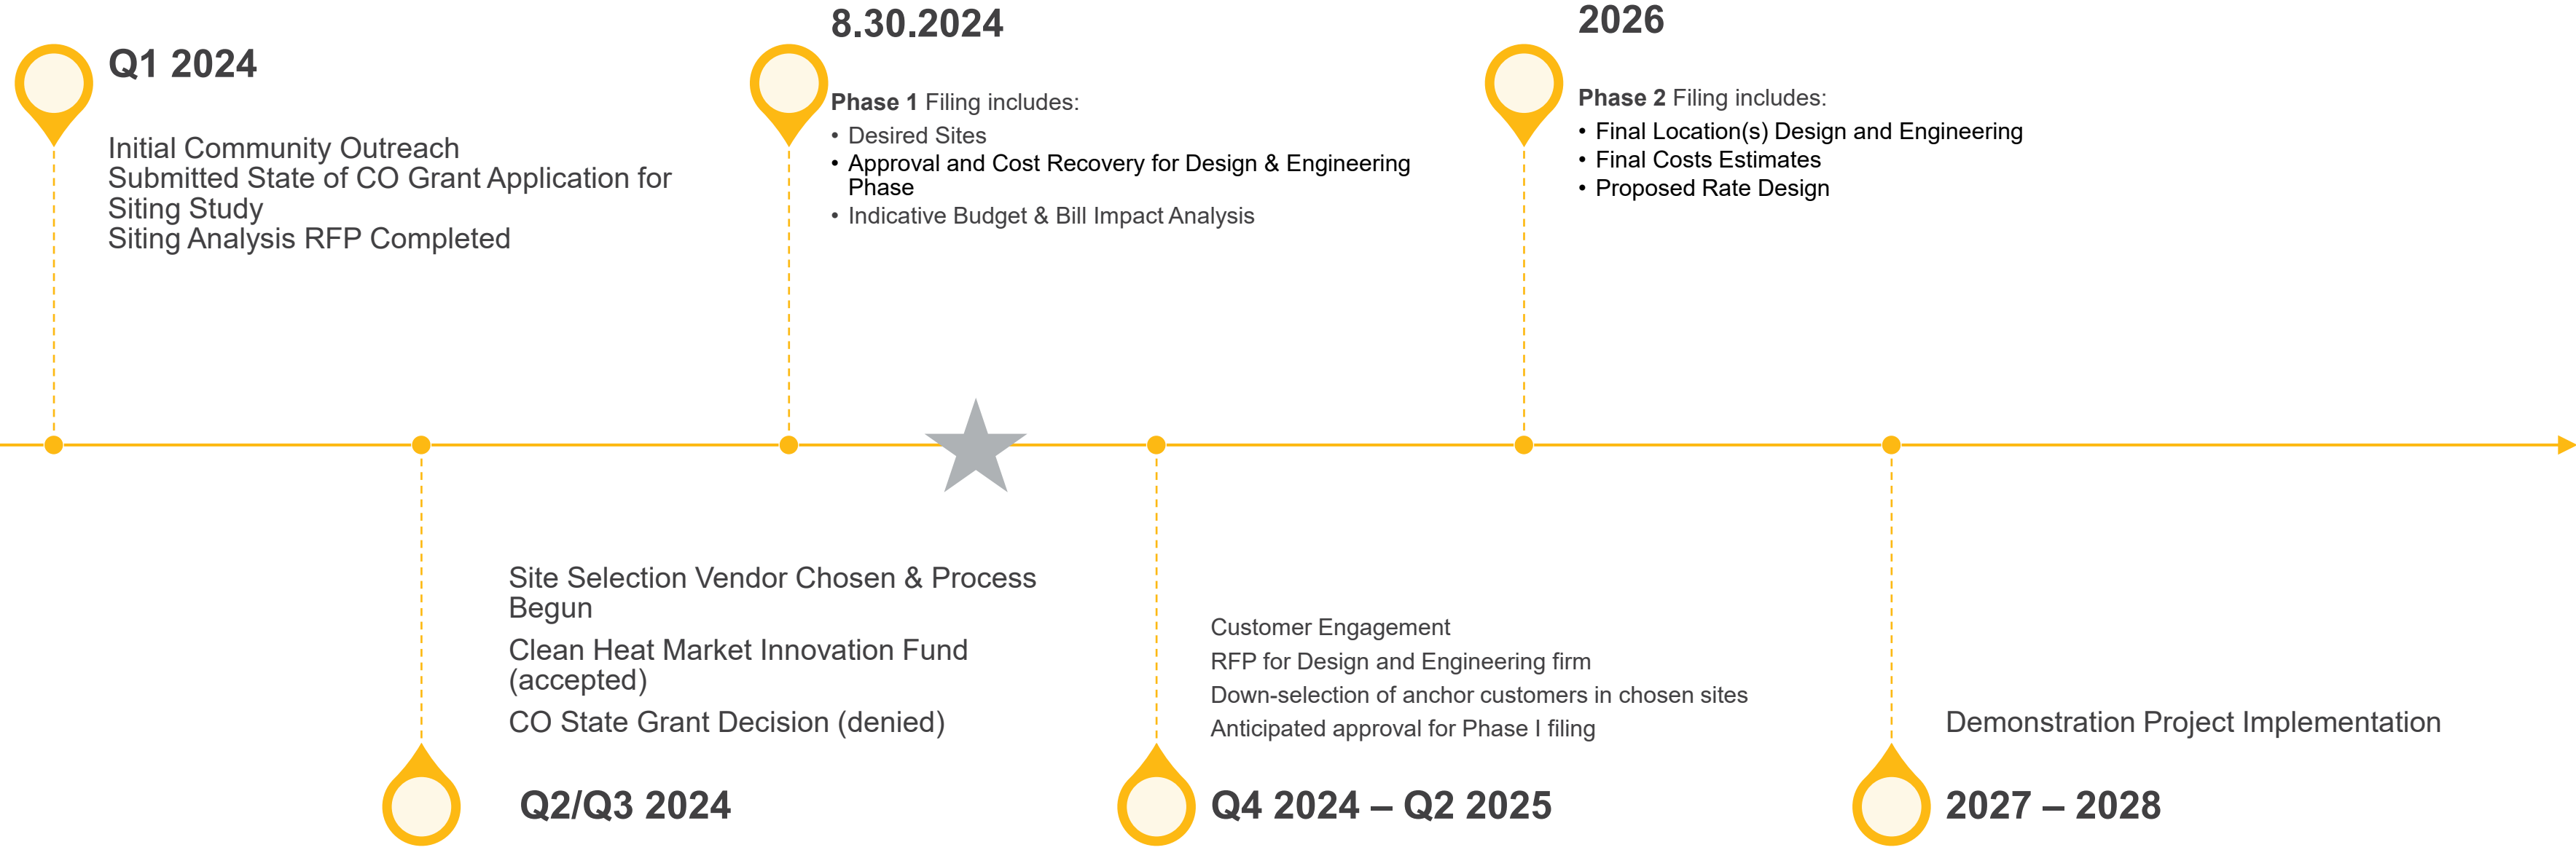

**MN 23-518**  
Natural Gas Innovation Act

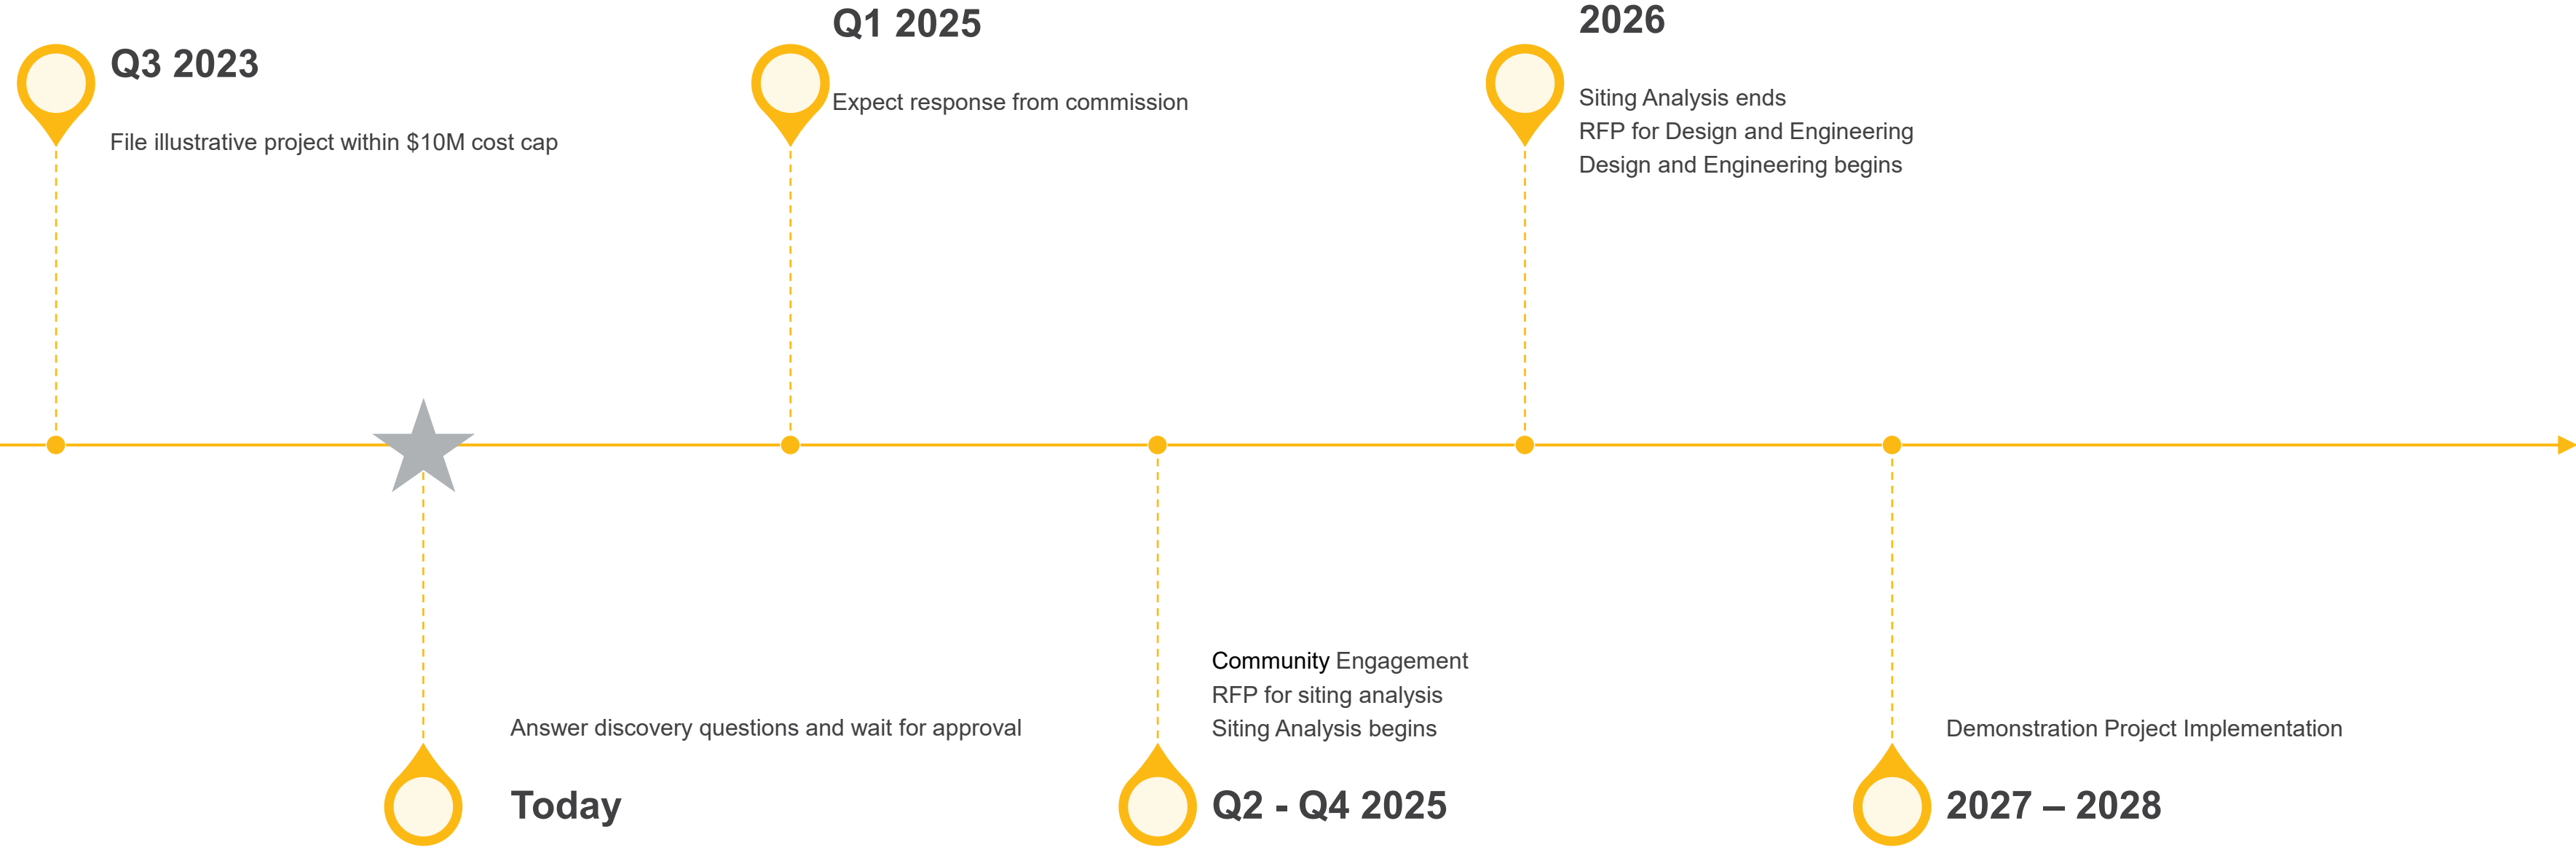

- PUC to establish a Thermal Energy Network Deployment Work Group to examine (1) the potential regulatory opportunities for thermal energy networks and (2) the potential barriers to development

**MN 24-275**

# Proposed CGSHP Demonstration Project Timeline - CO

# Proposed CGSHP Demonstration Project Timeline - MN

# River Mile Project

Opportunity that could be a backbone for expansion in the future

Current home to Elyse Gardens Amusement Park is in the process of being redeveloped.

The development is by far the largest in Denver, with a total planned square footage of over 12,000,000 square feet of residential, office, retail, and hotel space.

CGSHP system would mitigate large electric distribution capacity concerns while still heating and cooling the community electrically

# GHP Impacts Analysis (2023)

GTO funded an analysis by Oak Ridge National Laboratory and National Renewable Energy Laboratory to assess how mass deployment of geothermal heat pumps (GHPs) can provide cost and carbon reductions at the grid.

## Aimed to quantify:

- Effects on building electricity use and emissions resulting from mass deployment of GHPs
- Impacts to the bulk power system under various carbon policy, electrification, and sensitivity scenarios

The analysis considered GHPs at the individual building level, so networked deployment in community-scale systems could likely provide **even greater benefits.**

# GHP Impacts Analysis (2023)

Eliminate the need for up to **43,600 miles** of new interregional transmission infrastructure – equivalent of up to 44 SunZia transmission projects

Reduce up to **410 GW** of nationwide generation capacity requirements – bolstering seasonal U.S. grid resilience

Eliminate more than **7 gigatons** of carbon – equivalent to all U.S. emissions produced in 2022

# Pathways to Commercial Liftoff: Geothermal Heating and Cooling

- Cross-office collaborative DOE report
- Liftoff Reports take a technology or suite of technologies and build a common understanding with the private sector and broader ecosystem around the current state, pathways to commercial liftoff, and challenges and solutions to unlock scale
- **Anticipated late 2024 release of Liftoff Report focused on Geothermal Heating and Cooling technologies**

## LIFTOFF INSIGHTS

The Department of Energy's **Demonstrate Deploy Decarbonize** ("Deploy") annual conference and **Pathways to Commercial Liftoff** ("Liftoff") Reports share a common goal of facilitating discussion and action around accelerating commercialization and deployment of clean energy technology.

To date, DOE has released a series of Liftoff Reports that provide public and private sector capital allocators with a perspective as to how and when various technologies could reach full-scale commercial adoption – including a common analytical fact base and key signposts for investment decisions. The Deploy conference offers industry leaders and investors the opportunity to meet and discuss how to advance shared clean energy priorities in these constantly evolving markets. And, input and takeaways captured from Deploy conferences will feed into both new Liftoff report topics and existing reports as updates. To learn more about the Liftoff Reports and how DOE collaborates with the private sector to provide sector-specific perspectives for capital allocators, visit [About Liftoff Reports](#).

GEOTHERMAL TECHNOLOGIES OFFICE

[www.HeroX.com/GHPPATHS](http://www.HeroX.com/GHPPATHS)

## About the Prize

The Partnerships to Accelerate Training and Hiring for Geothermal Heat Pumps (GHP PATHs) Prize is a \$3,000,000 prize aimed to catalyze regional, outreach-focused partnerships to improve Geothermal Heat Pump workforce pipeline development.

### Partnership

Different stakeholders in the GHP training and employment process will work together to either create or improve the GHP workforce pipeline in their region.

### Training and Certification

Teams will determine a reasonable number of trainees that can complete new trainings, and develop a timeline and budget for their completion.

### Hiring

Local GHP employers commit to hiring these trained workers for a minimum amount of time or projects.

# Incentives and Resources

## GHPs in the Inflation Reduction Act

- **Residential:** 30% tax credit for ENERGY STAR-rated GHPs through 2032 (§25D), staging down in 2033 and 2034. Claimed on Form 5695.

<https://www.energystar.gov/productfinder/product/certified-geothermal-heat-pumps/>

- **Commercial:** Investment Tax Credit (§48 ITC) for geothermal heat pump property having beginning of construction before January 1, 2035. For geothermal, base ITC is 6% through 12/31/2032 (staging down in 2033 and 2034); credit increases to 30% for projects meeting labor, content, and locations criteria (or below 1MW), with additional 10%-20% available for projects qualifying for Energy Communities or Domestic Content bonuses. Direct pay available for certain entities

<https://energycommunities.gov/> (includes Tax Credit Bonus Mapping tool built by DOE's National Energy Technology Laboratory (NETL))

Energy Efficient Commercial Buildings Deduction (179D) – Provides a deduction for energy improvements made on new and refurbished property based on meeting certain standards. Base rate of \$0.50 per square foot for a building with 25% energy savings, up to \$1.00/sf for a building with 50% energy savings; rate is 5x if PWA requirements met.

Geothermal Technologies Office » Basics & Resources »  
Tax Credits, Incentives, and Technical Assistance for Geothermal Heat Pumps

**Geothermal heat pumps** (GHPs, also known as ground source heat pumps) use the relatively constant temperatures found in the subsurface to warm indoor air in winter and cool it in the summer. Because these constant temperatures can be found nationwide, these systems offer an efficient and low-carbon option to heat and cool homes, businesses, and other buildings in all 50 U.S. states.

Geothermal heat pumps (GHPs) can be added to existing buildings, and tax credits and other financial assistance can make new or retrofitted GHPs more affordable.
